SLIREJ SS side filled:

Is made of steel and then galvanized.
The hatch is located on the side of the box.
The box holds about 90 liters of gravel.
Fits both bracket 600 and 650.

SLIREJ ST top filled:

Is made of steel and then galvanized.
The hatch is located on the top of the box.
The box holds about 90 liters of gravel.
Fits both bracket 600 and 650.

SLIREJ SK hatch both on the side and top:

Is made of steel and then galvanized.
The hatch is like the SS box located on the side and with a hatch on top of the box.
The box holds about 90 liters of gravel.
Fits both bracket 600 and 650.

SLIREJ LS is a smaller box with the hatch on the side.

Is made of steel and then galvanized.
The hatch is located on the side of the box.
The box holds about 60 liters of gravel.
Fits bracket 600.

NOTE!

Used for smaller chassi buildings and where there is less space.

Bracket system 600:

Is a bracket welded together and galvanized.
The bracket fits together with boxes SS, ST, SK and LS.
600 stands for the total measurement from the front edge of the driver wheel and forward.

Bracket system 650:

Is a bracket welded together and galvanized.
The bracket fits together with boxes SS, ST and SK.
650 stands for the total measurement from the front edge of the driver wheel and forward.

Can be used if there is a need to put snow chains on the drive wheels.

Is pressurized by an air bell, wich you can divide the the pressure axle, and make the distance between the box and driver wheel bigger, so you can put snow chain on the wheel..

As an alternative to the 650 system with air cylinder you can use the bellow 650 system.

To reset the bellow 650 system, you only have to push the electric switch, and it will push back to normal again. Now its back to operating mode.
